

## Enpass vs Bitwarden: Key Differences for IT Decision-Makers

Choosing a password manager for your organization isn't just about storing passwords, it's about how much control you have over your data, how easily it fits into your existing setup, and how confidently you can scale without worrying about compliance or cost.

This quick comparison highlights the key differences between **Enpass** and **Bitwarden**:

Features	Enpass	Bitwarden (Self-hosted)	Bitwarden (SaaS)
Data Location	Your Microsoft 365 or Google Workspace	Self-hosted on your infrastructure	Bitwarden Servers
Data Sovereignty	You control your data location	You control the data location	You have no control on data location
Data Decentralization	Users' data is stored only on their devices & their Microsoft 365 or Google Work accounts	All users' data is stored in the organization's own servers.	All users' data of every Bitwarden customer is stored on Bitwarden's servers.
Immune to Mass Breaches	Yes	No, one single breach can provide access of all users' data to the hacker.	No, one single breach can provide access of all users' data to the hacker.
Maintenance Overheads	No overheads. Enpass leverages your existing Microsoft 365 or Google Workspace setup.	High overheads. IT team is responsible for server setup, deployment, maintenance, regular updates, and monitoring.	No overheads
Supported MFA Levels	Upto 4	Upto 3	Upto 3
Admin Control	Yes	Yes	Yes
Password Sharing	Yes	Yes	Yes
